HEALTH, HEALTH CARE AND THE BLACK COMMUNITY:

AN EXPLORATORY BIBLIOGRAPHY

by

William M. King
Assistant Professor
Black Studies
University of Colorado
Boulder, Colorado

PREFACE

To those most familiar with their situation, the health and health care experiences of Blacks in the cities leaves much to be desired. Higher mortality rates, a greater incidence of major diseases, lower availability and underutilization of medical services--all are part of the day-to-day struggle to stay alive in the inner city. If we add to this the ever present reality of higher admission rates for the poor and the Black to public mental hospitals because of their inability to pay for the psychiatric services they need, the true nature of "Quality" American medical care slowly emerges into the light of day.

The sources cited in this bibliography were gathered with the aim of providing some historical data, present data, and potential for the future information on the relation of Blacks, medicine, and the allied health fields. It is our hope that they will find their best use in deepening the awareness and understanding of those charged with the comprehensive planning of our communities.
